Re: Air Construction Permit 966398P – Generators  
Wampler's Farm Sausage Company

Dear Mr. Trimmer:

On behalf of Wampler's Farm Sausage, Proton Power is providing notification of initial startup of the 3 generators. At this time the generators are operating on natural gas only. A catalytic oxidizer is not being utilized while natural gas is being supplied. Proton Power has portable and stationary emissions testing equipment which indicate compliance with the emissions limits set forth in the permit referenced above. We anticipate that the system will be producing CHyP gas to power the generators by September, however we will provide notification when that occurs.

Should you have any questions, or need additional information, please do not hesitate to contact me at 865-312-3859.

Sincerely,

A handwritten signature in cursive script, appearing to read "Sally Almond", with a long horizontal flourish extending to the right.
